IDROFAN.

42N

Total cooling capacity 0.75-6.35 kW
Total heating capacity 0.60-9.50 kW

The new generation 42N_S product range combines aesthetic and attractive design with versatility to satisfy any application need, from large office buildings or hotels to shops and residential applications.

This new product series is characterised by concentrated, innovative technology, unusual for a fan coil. The result is a product that is easy to select and install.

The 42N_S is available with a new-generation three- or five-speed AC motor.

The range now includes seven sizes, with air flows from 35 to 422 l/s (126 to 1520 m³/h). The Idrofan offers an ultra-low-noise option for applications where a low noise level is the most important selection parameter.

The new Idrofan is available with two types of fans, a tangential fan for the smallest size 15 and a centrifugal fan for all other sizes.

The fan versions are available in any combination, from cabinet models for floor or under-ceiling installation to models without cabinet for furred-in or ceiling void horizontal or vertical installation.

Features

- With its sleek styling the 42N_S cabinet units blend in perfectly with any room décor. The pre-painted steel panels are protected by a high-quality paint finish.
- The flexibility of the plastic-moulded unit drain pan allows the same unit to be installed in a vertical or horizontal position without the need for a dedicated accessory.
- Integrated, factory-mounted cooling and heating coil for four-pipe applications.
- The 42N_S units were designed for extremely quiet operation with sound levels that set new comfort standards for buildings. The new fan/motor assembly design ensures whisper-quiet operation (10 dB(A) less compared to the previous version). Particular attention has been given to the low fan speed, typically used at night.
- Motors
The Idrofan is available with a multi-speed motor, extended to five fixed speeds to improve its flexibility and cover all customer applications. The Idrofan is now available with ultra-low noise levels to make it one of the quietest fan coils on the market.

■ Filters

The standard filter for the Idrofan series has a pleated filtration surface, resulting in a 87% larger surface than a conventional filter, with the following additional advantages:

- Lower air flow per unit area, resulting in lower pressure drop and reduced noise level.
- The average interval between filter cleaning is three times longer, compared to standard filters.
- The filter material is polypropylene and the grade is EU1.

As an option the Idrofan is also available with 85% gravimetric (EU3 or G3) filters with fire class M1.

In the Idrofan series the filter is located at the bottom of the unit. Cleaning is easy: after removing a safety screw, the filter sides can be manually unclipped. The filter frame can be pulled down and the filter can then be removed easily. Re-assembly is just as easy, reversing the sequence. The filter and filter position within the unit are designed to prevent air bypass around the filter, to ensure that the air is always filtered and clean.

■ Ease of installation

The Idrofan series fan coils are extremely easy to install. For horizontal under-ceiling installations with cabinet or ducted ceiling-void applications the installer's task is significantly simplified.

Robust hooks allow easy and fast attachment of the unit. No calculations are needed to determine the correct slope for proper condensate water drainage.

For concealed ducted applications, both air intake and outlet flange can be mounted on the unit before installing them together as a single piece in the false ceiling.

Even the installation of floor-mounted units is simple, the new hook dimensions and positions help fixing the units firmly against the wall.

All these design aspects minimise installation time and improve the long-term reliability, avoiding small mistakes that could impair the reliability of installed units over time.

Carrier controller range

The Idrofan fan coil is available with the complete range of Carrier controllers. Several tests ensure easy installation. The number of available controllers offers more and improved features, and easy selection according to application needs.

■ Electronic thermostat

This is available for two-pipe (type A), four-pipe or two-pipe applications with electric heaters (type B). The thermostats have an elegant square shape with two coaxial knobs to set room temperature and fan speed, as desired by the customer.

Wall-mounted controls are easily and discreetly integrated in any room environment.

Features of the electronic thermostats A and B

- Set range: From 10°C to 30°C with the possibility to limit the temperature in public buildings where low energy consumption is a key requirement via a dip-switch inside the control.
- The following limitations can be set:
 - Cooling mode: minimum set point allowed - 23°C
 - Heating mode: maximum set point allowed - 20°C
- Auto fan: The fan speed is automatically set by the control; when the room temperature is far from the set point, high fan speed is selected. As the room temperature approaches the desired value, the fan speed decreases until the minimum speed is reached.

- Automatic changeover: Automatic changeover from the cooling to heating mode, based on the water temperature, ensures that the ideal room temperature is maintained.
- Remote changeover: Automatic changeover from cooling to heating mode, based on the remote signal from the monitoring system.
- Warm and cold draught protection: This feature stops the fan when the set point condition is satisfied and the water temperature is too low or too high, ensuring that air that is too cold or too warm does not cause discomfort to the room occupants.
- Air sensor: This is unit-mounted – if the control is wall-mounted, a second air sensor located in the control can be used for fine tuning of the desired room temperature.
- Frost protection: This function ensures that the room temperature is kept above a minimum level. If the unit is in off mode, and the room temperature drops below 7°C, frost protection is enabled and the unit operates in heating mode until the temperature rises above 9°C. At this point the unit is switched off again.
- Booster heating management optimisation (available with electric heater option): if the water temperature is below 30°C the system will work in the heat demand mode and the electric heater will be the only available heating source. If the water temperature is above 35°C the system will work in the booster heating mode, energising the water valve and electric heater together. The booster heating function will be deactivated if the water temperature is above 45°C (the electric heater will be deenergised).
- Energy saving: This feature allows saving energy when the room is unoccupied, without the need to switch off the unit. When the energy-saving button is pressed, the actual set point will be modified as follows, without changing the position of the set point selection knob:
 - Cooling mode: Set point raised by 4°C
 - Heating mode: Set point lowered by 4°CThe unit will resume normal operation, once the energy-saving button is pressed again.

■ HDB (Hydronic Dual Board)

This electronic thermostat allows master/slave operation. The master unit can manage up to 15 slave units. This controller can be used with a wall-mounted user interface or a remote end user control.

■ NTC controller

This is a communicating PID controller, combining energy-saving algorithms and full control function solutions, compatible with the Aquasmart Evolution system package.

■ Valve options

- Valve body: both the two-way or four-way (three-way with integrated bypass) valve options are factory-fitted and tested. The valves are fully insulated within a moulded insulating shell, preventing condensation on the valve body, for both vertical and horizontal applications. This new shell reduces the complexity of the offer and prevents water leakage risk. Valves can be factory-fitted on the left or right-hand side.
- Valve actuators: a wide choice of actuators is available with two or four-way valve bodies to offer the right solution for any controller type and customer requirement, from on/off to proportional types, with either 230 V or 24 V power supply:
 - On/off 230 V actuator
 - On/off 24 V actuator
 - Floating 3-point 230 V actuator
 - Floating 3-point 24 V actuator
 - Modulating 0-10 V/24 V actuator

- Main drain pan and insulation

The main drain pan incorporates innovative technological solutions:

 - Horizontal installation: the units can be installed perfectly horizontal - the drain pan structure takes care of the slope, so that the installer avoids complex and time-consuming computations to correctly install the units.
 - Left or right-hand condensate connection is standard
 - the installer can easily choose unit connection on one side or the other, just by fixing the plastic cap on the opposite side.
 - Insulation: the drain pan design allows much tighter contact between drain pan and insulation, reinforced by metal clips to keep the insulation in place. This improves reliability and prevents water dripping from the unit.
 - The drain pan for the whole range is made of moulded plastic, i.e. more robust, easier and safer to service.
- PTC electric heater

Electric heater options have been enhanced with the latest PTC (positive temperature coefficient) technology. Their resistance increases as their temperature increases, so the capacity goes down accordingly. This electric heater feature allows fast heating at start-up, the heating capacity is adjusted automatically, whilst ensuring safe and reliable operation. This option is available in low and high capacity for each Idrofan size.
- Feet mounting

The installation of feet has been greatly simplified and both sides are painted. Just one clip is needed to fix the feet to the units. For this reason and for better reliability during transport, the feet are sold as options - supplied with the unit from the factory (ordering codes Z or P in the 4th digit). They are included with the unit, but not factory-mounted.
- Reversibility

If the unit received is not as required, the coil and the control box can be switched on site from left to right or vice versa (except units equipped with valves - since their installation is optimised for each side, the valve package must be replaced by a new valve kit).
- Simplified accessories

The number of accessories has been reduced to simplify selection and reduce the inventory level. The accessories offered remain unchanged to satisfy any application needs, but the number of codes has been greatly reduced.
- Aesthetics
 - Supporting feet
 - Supporting feet and cover panel
 - Return air grille for cabinet unit
 - Rear closing panel
 - Cabinet on concealed units,
 - Discharge air sleeve (concealed units only)
 - Supporting brackets (20 + 20 pieces left and right)
- Controllers and user interfaces
 - A-type thermostat
 - B-type thermostat
 - Kit for 33TA0001/33TB0001 installation on 42NM/Z
 - Cold draught prevention kit - all two-pipe sizes
 - Automatic changeover switch - all units
 - Air sensor with 15 m cable
 - Water sensor kit with 15 m cable
 - Infrared remote controller (IR2)
 - Infrared remote receiver kit (IRR)
 - ZUI1 interface 1 - Wago
 - ZUI2 interface 2 - RJ11
 - SUI1 (with fan speed selection)
 - SUI2 (without fan speed selection)
- The units comply with international standards EN60335-1 and EN60335-2-40 and are certified according to the applicable Eurovent standards for the non-ducted fan coil programme.

Two-pipe coil pressure drop

Cooling conditions (entering water temperature = 7°C)

Heating conditions (entering water temperature = 50°C)

Four-pipe coil pressure drop

Cooling conditions (entering water temperature = 7°C)

Heating conditions (entering water temperature = 70°C)

- 1 42N_S45/42N_S65
2 42N_S30/42N_S42
3 42N_S20/42N_S26
4 42N_S15

Two-way valve pressure drop

1 1/2", cold and hot
2 3/4"

Four-way valve pressure drop

1 1/2" bypass, cold and hot
2 1/2" open, cold and hot
3 3/4" bypass
4 3/4" open

Notes:

Pressure drop values are based on a water temperature of 20°C.
For other water temperature values, use a correction factor of 0.4% per °C.

Air throw

The air throw value gives the position where the air velocity is 0,2 m/s when the air is blown horizontally with the grille pointing upwards. Air throw values are given as a guideline only, and change with room dimensions and furniture used in the room.

Operating limits

Water circuit	Maximum water side pressure: 1400 kPa (142 m WG)	Minimum entering water temperature: 2°C Maximum entering water temperature: 80°C
Indoor temperature		Minimum temperature: 5°C Maximum temperature: 32°C*
Power supply	Nominal supply Operating limits	230 V - 1 ph - 50 Hz Min. 207 V - max. 253 V for units without electric heaters Min. 218 V - max. 244 V for units with electric heaters
Maximum available static pressure	R1 super-high speed, dry coil**	Size 15: 30 Pa Size 20: 50 Pa Size 45: 110 Pa
	R3 medium speed, dry coil**	Size 15: 20 Pa Size 30: 45 Pa Size 20: 35 Pa
	R5 ultra-low speed, dry coil**	Size 15: 5 Pa Size 20: 20 Pa Size 45: 50 Pa
	R1 high speed, dry coil**	Size 26: 110 Pa Size 42: 120 Pa
	R2 medium speed, dry coil**	Size 26: 80 Pa Size 42: 110 Pa Size 65: 110 Pa
	R3 low speed, dry coil**	Size 26: 25 Pa Size 42: 60 Pa Size 65: 75 Pa

* In heating mode with electric heater.

** When using dehumidification, reduce by 5 Pa. For other selectable speeds, refer to the fan performance curves.

Carrier is participating in the Eurovent Certification
Programme for fan coil units. Products are as listed in the
Eurovent Directory of Certified Products or on the Internet
site www.eurovent-certification.com.

Order No. 14494-20, 03.2011 - Supersedes: 14494-20, 09.2010
Manufacturer reserves the right to change any product specifications without notice.

Manufactured by: Carrier SpA, Villasanta, Italy.
Printed in the Netherlands.
